

ROOFTOP SYSTEMS

ELEVATE YOUR SENSES

a history of innovation

SINCE THE FIRST PROTOTYPE WAS DESIGNED in 2009, Mbrico Tile Decks has redefined passion, product innovation, and engineering in the tile surface industry. Our experience in construction and home building led us to create a luxurious yet simplistic groutless tile rooftop system that integrates beautifully into any design. Our ambitious innovation and eye for design are what separate Mbrico from the rest.

This is the industry's first ready-to-install flat roof product that's not satisfied by any other product on the market. It's safer, easier to use, and extremely durable. With a combination of American craftsmanship, high-quality Italian stoneware, and groundbreaking technology we created an outdoor surface that is the strongest and most cost-effective product available. Every Mbrico project is a work of art that is enhanced by its simplicity. Crafted with the finest raw materials and manufactured with scrupulous attention to detail, every flat roof is created to your specifications.

proprietary & revolutionary system

MBRICO IS PROUD TO PRESENT

a turnkey system of rooftop coverings made with beautiful Italian porcelain tile that are interlocking, self-spacing, safe, and easy to install.

When other porcelain paver manufacturers are pulling back due to safety concerns, our revolutionary tile backer pushes the envelope with a better design, rigorous testing, and a safer product for our customers.

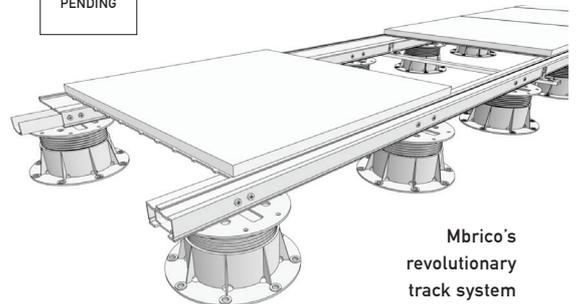

Designed with installers in mind, it uses a revolutionary adjustable pedestal and track system that allows crews to move 30 percent faster. Unlike traditional concrete or porcelain tiles that use pedestals on each corner, the Mbrico track system has a straight line, self-leveling extrusion that guarantees perfect spacing and reduces pedestal quantities by almost 40 percent.

Typically, unbacked 2cm tiles can't be installed on an elevated surface due to safety concerns. We manufacture high-quality porcelain stoneware bonded to a proprietary backer that is safe to use as a raised surface on pedestals.

All the pipes and wires laid beneath the tiled surface can be inspected any time. Simply lift and remove the slabs for instant accessibility.

Get a modern, clean-cut look without the weight of concrete or maintenance of wood. Our team of draftsmen, designers, and representatives look forward to working with you on the best and last rooftop deck you'll ever install.

PATENTS & PATENTS PENDING

Mbrico's revolutionary track system

Mbrico works in perfect harmony with all of the industry's popular railing solutions. Adaptable to surface or fascia-mounted railings with tile waterfall edges, composite picture frame borders, or flush fascia boards, Mbrico can be modified to fit your project's design and style.

designed for life

A COMBINATION OF AMERICAN CRAFTSMANSHIP, high-quality Italian stoneware, and ground-breaking technology provide a myriad of advantages to create the most durable outdoor surfaces.

ANTI-SLIP - Mbrico surfaces are ADA-compliant, skid-resistant, and textured to prevent slipping, even when wet.

WEIGHT LOADS - Each porcelain slab can bear a load of up to 5,300 lbs, making Mbrico Tile Decks one of the strongest and most durable options on the market. Other materials have a shatter liability and fall-through risk, but we are proud to deliver a safer product to our customers.

RESISTANCE - Nothing stands in the way of your Mbrico tile rooftop. Each of our materials is resistant to mold, stains, frost, flames, chemicals, and extreme temperatures.

We have had nothing but praise from the owner, architect, and general contractor on the [Ball State University] project. This could end up being a showpiece for a lot of people... ”

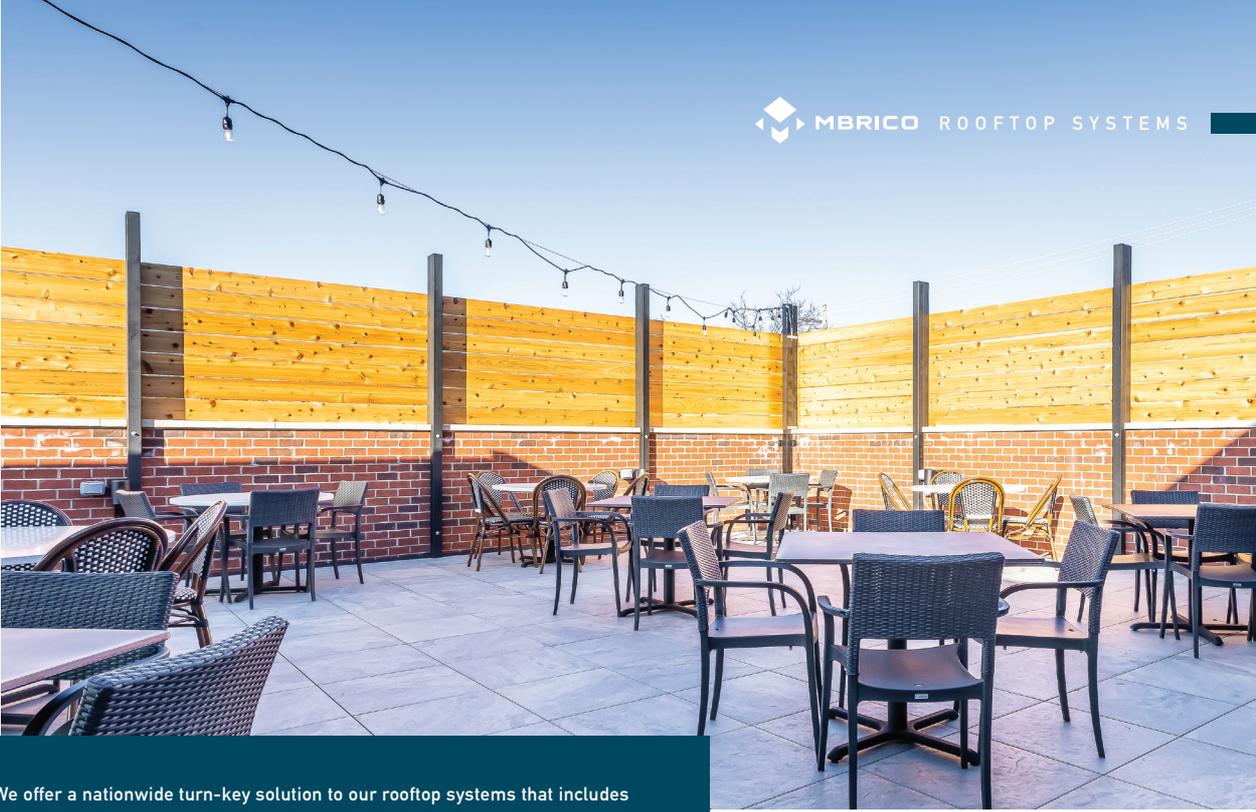

- Kelly Fields
Blackmore and Buckner Roofing, LLC

AFFORDABLE - Manufactured in the U.S. eliminates expensive outsourcing, importing from overseas, or extended lead times. This is the most cost-effective tile rooftop the industry has ever seen.

THERMAL INSULATION - The gap between the floor and the membrane encourages constant airflow, which improves thermal insulation and the longevity of the waterproofing membrane.

COMPRESSION AND EXPANSION ABSORPTION - The decoupling of the flooring and the supporting elements assists in the absorption of the structural movements.

We offer a nationwide turn-key solution to our rooftop systems that includes installation. Contact us for an installation quote of a Mbrico rooftop system for your commercial or residential project.

SUSTAINABLE - Inspired by our beautiful earth and designed to have as little impact on it as possible. Our tile is made without harmful chemicals, varnishes, and resins. Each Mbrico Tile Decks component is built to meet LEED standards. Our commitment to sustainability is reinforced by the longevity of your deck, which is designed to last a lifetime on your property and not in a landfill.

EASY INSTALLATION - Ready to install, each component is precision cut for accurate coupling of slabs. Our grout-free and self-spacing system makes installation remarkably easy for skilled carpentry crews using mechanical fasteners and standard tools. Plus, when it's done, it's done. No painting, staining, or sealing is required - ever.

WIND UPLIFT PROTECTION -

Mbrico is the only hurricane-approved porcelain rooftop system on the market. In coordination with the industry's leading pedestal manufacturers, we designed a product that meets wind uplift requirements with our standard Mbrico track system, additional salt-resistant aluminum fasteners, and a higher-grade pedestal. This system has been third-party tested in Miami-Dade County and is being used on rooftops in America's hurricane regions.

WEIGHT REDUCTION - By

eliminating the cement screed, the elevated surface substantially reduces the weight on the structure.

WARRANTY - Residential and commercial customers enjoy a limited lifetime warranty.
